

**Subject line:**

Mandatory Security Action: Update iPhones to version 9.3.5

**Email body:**

Hi [Your Company Name],

By now you may have heard about the [Pegasus attack and Trident vulnerabilities](#). This is a sophisticated piece of mobile spyware that can activate a phone's cameras and microphone to snoop on conversations; track location; steal calls, texts, calendar and contacts; and intercept messages sent from other apps including Gmail, Facebook, Skype, WhatsApp, FaceTime, and more.

**All employees should update their iPhones to the latest version of iOS immediately.**

You can update your phone by going to Settings, then to "General," and click "Software Update." It will give you an option to update to the latest iOS version there.

If you're unsure what version you're running, you can check Settings > General > About > Version.

Please do so by end of day today.

Thanks,

[Sender Name or Organization Name]
